

FIREMAGIC®

AURORA

BUILT-IN OUTDOOR GAS GRIDDLE

A660i-0T4(N,P)

INSTALLATION AND OWNER'S MANUAL

INSTALLER: Leave these instructions with consumer.

CONSUMER: Retain for future reference.

IMPORTANT: READ THESE INSTRUCTIONS CAREFULLY BEFORE STARTING INSTALLATION OR USE.

WARNINGS AND SAFETY CODES

ONLY TO BE USED OUTDOORS

CODE AND SUPPLY REQUIREMENTS: Installation must conform with local codes or, in the absence of local codes, with either the *National Fuel Gas Code*, ANSI Z223.1/NFPA 54, or the *Natural Gas and Propane Installation Code*, CSA B149.1, or the *Propane Storage and Handling Code*, CSA B149.2, as applicable.

The outdoor cooking gas appliance and its individual shut-off valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psi (3.5 kPa).

The outdoor cooking gas appliance must be isolated from the gas supply piping system by closing its individual manual shut-off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psi (3.5 kPa).

This appliance is designed as an attended appliance. DO NOT leave this appliance burning when unattended.

If an external electrical source is utilized, the outdoor cooking gas appliance, when installed, must be electrically grounded in accordance with local codes or, in the absence of local codes, with the *National Electrical Code*, ANSI/NFPA 70, or the *Canadian Electrical Code*, Part I, CSA C22.1.

Keep any electrical supply cord and the fuel supply hose away from any heated surfaces.

⚠ DANGER:

IF YOU SMELL GAS:

- Shut off gas to the appliance.
- Extinguish any open flame.
- Open lid.
- If odour continues, keep away from the appliance and **immediately** call your gas supplier or the fire department.

⚠ WARNING:

- Do not store or use gasoline or other flammable liquids or vapours in the vicinity of this or any other appliance.
- An LP cylinder not connected for use shall not be stored in the vicinity of this or any other appliance.

⚠ WARNING:

Improper installation, adjustment, alteration, service, or maintenance can cause injury or property damage. For proper installation, refer to the installation instructions. For assistance or additional information, consult a qualified professional service technician, service agency, or the gas supplier.

Proper operation of your grill requires prompt and periodic maintenance. See the **SERVICING AND CLEANING section for details.**

Certified to: ANSI Z21.58
CSA 1.6

FIREMAGIC®

AURORA

PLAQUE À GAZ EXTÉRIEURE ENCASTRABLE
A660i-0T4(N,P)

INSTALLATION ET LE MANUEL DU PROPRIÉTAIRE

INSTALLATEUR: laissez ces instructions au consommateur.

CONSOMMATEUR: À conserver pour référence future.

IMPORTANT: LIRE ATTENTIVEMENT CES INSTRUCTIONS AVANT DE COMMENCER L'INSTALLATION OU L'UTILISATION.

AVERTISSEMENTS ET CODES DE SÉCURITÉ

À UTILISER UNIQUEMENT À L'EXTÉRIEUR

EXIGENCES EN MATIÈRE DE CODE ET D'APPROVISIONNEMENT: L'installation doit être conforme aux codes locaux ou, en l'absence de codes locaux, soit au *National Fuel Gas Code*, ANSI 2223.1/ NFPA 54, soit au *Natural Gas and Propane Installation Code*, CSA B149.1, soit au *Code de stockage et de manipulation du propane*, CSA B149.2, selon le cas.

L'appareil de cuisson au gaz extérieur et son robinet d'arrêt individuel doivent être déconnectés du système de tuyauterie d'alimentation en gaz pendant tout essai de pression de ce système à des pressions d'essai supérieures à 1/2 psi (3,5 kPa).

L'appareil de cuisson au gaz extérieur doit être isolé du système de tuyauterie d'alimentation en gaz en fermant son robinet d'arrêt manuel individuel pendant tout test de pression du système de tuyauterie d'alimentation en gaz à des pressions d'essai égales ou inférieures à 1/2 psi (3,5 kPa).

Cet appareil est conçu comme un appareil surveillé. NE PAS laisser cet appareil brûler sans surveillance.

Si une source électrique externe est utilisée, l'appareil à gaz de cuisson extérieur, lorsqu'il est installé, doit être mis à la terre conformément aux codes locaux ou, en l'absence de codes locaux, avec le *National Electrical Code*, ANSI/NFPA 70, ou le *Canadian Electrical Code*, Code, Partie I, CSA C22.1. Gardez tout cordon d'alimentation électrique et le tuyau d'alimentation en carburant à l'écart de toute surface chauffée.

⚠ DANGER:

SI VOUS SENTEZ DU GAZ:

- Coupez le gaz de l'appareil.
- Éteignez toute flamme nue.
- Ouvrez le couvercle.
- Si l'odeur persiste, éloignez-vous de l'appareil et appelez **immédiatement** votre fournisseur de gaz ou les pompiers.

⚠ ATTENTION:

- N'entrez pas et n'utilisez pas d'essence ou d'autres liquides ou vapeurs inflammables à proximité de cet appareil ou de tout autre appareil.
- Une bouteille de GPL non connectée pour utilisation ne doit pas être stockée à proximité de cet appareil ou de tout autre appareil.

⚠ ATTENTION:

Une installation, un réglage, une modification, un entretien ou une maintenance inappropriés peuvent causer des blessures ou des dommages matériels. Pour une installation correcte, reportez-vous aux instructions d'installation. Pour obtenir de l'aide ou des informations supplémentaires, consultez un technicien de service professionnel qualifié, une agence de service ou le fournisseur de gaz.

Le bon fonctionnement de votre gril nécessite un entretien rapide et périodique. Voir la section ENTRETIEN ET NETTOYAGE pour plus de détails.

Avertissements généraux :

- Cet appareil est destiné à une utilisation en extérieur uniquement. Si l'appareil est entreposé à l'intérieur, retirez les bouteilles et gardez-les à l'extérieur.
- Ne couvrez pas immédiatement l'appareil après utilisation. Laissez-le refroidir avant de le couvrir, de le déplacer ou de le ranger. Ne pas respecter cette mesure de sécurité pourrait entraîner un incendie causant des dommages matériels, des blessures ou la mort.
- Ne pas utiliser cet appareil sous une surface combustible.
- Ne pas utiliser cet appareil sous un auvent. Le non respect de cette mesure de sécurité pourrait entraîner un incendie ou des blessures.
- Tous les dégagements minimaux détaillés dans la section INSTALLATION REQUIREMENTS DOIVENT être respectés.
- Un régulateur de pression de gaz doit être utilisé avec cet appareil de cuisson à gaz pour l'extérieur. Ce régulateur doit être réglé pour une pression de sortie de 5 pouces colonne d'eau pour le gaz naturel et de 10 pouces pour le propane. Veuillez consulter la liste des pièces de ce manuel du propriétaire pour vérifier si un régulateur est inclus avec votre appareil.
- LE RÉGULATEUR DOIT ÊTRE ÉVALUÉ POUR UN MAXIMUM DE 1/2 (LIVRES PAR POUCES CARRÉS). Veuillez consulter la liste des pièces de ce manuel du propriétaire pour vérifier si un régulateur est inclus avec votre appareil. SI VOTRE OFFRE DE GAZ EST SUPÉRIEURE DE 1/2 (LIVRES PAR POUCES CARRÉS), UN RÉGULATEUR ADDITIONNEL DOIT ÊTRE INSTALLÉ AVANT L'UTILISATION DE L'APPAREIL. VEUILLEZ CONSULTER LA SECTION DES CONDITIONS D'ALIMENTATION EN GAZ POUR LA PRESSON APPROPRIÉE DE L'ALIMENTATION EN GAZ.
- Ne couvrez jamais la surface entière de cuisine ou de gril de gauffreuses ou de casseroles. La surchauffe se produira et les brûleurs ne seront pas très performants quand la chaleur de combustion est emprisonnée au-dessous de la surface à cuire.
- Ne jamais pulvériser d'eau sur une unité de gaz chaude, car cela peut endommager les surfaces ou les composants.

Avertissements de propane :

- Une fuite de GPL peut causer un incendie ou une explosion si enflammée entraînant des blessures corporelles graves ou la mort.
- Communiquez avec le fournisseur de GPL pour les réparations ou pour disposer de la bouteille ou du GPL non utilisé.

INSTALLATION, OPERATION, AND SAFETY INFORMATION

1. Wear gloves and use extreme caution whenever installing and handling this product and its accessories as certain components have sharp edges that can cause personal injury.
2. The outdoor appliance and surrounding area **MUST** remain clear of flammable substances such as gasoline, yard debris, wood, etc. Maintain a minimum horizontal clearance of 18" (in all directions) from combustible materials/items.
3. Do not block the front air inlet along the bottom of the control panel. See the COMBUSTION AIR AND COOLING AIRFLOW section under INSTALLATION REQUIREMENTS for details.
4. **This unit must be installed so that the required vent openings and surrounding area of the enclosure remain clear and free at all times. See the ENCLOSURE REQUIREMENTS section for details.**
5. When using propane gas: the propane cylinder, regulator, and rubber hose must be in a location not subject to temperatures above 125° F (51° C).
6. The griddle lid must be removed before using unit.
7. Before each use, ensure the flames on each burner burn evenly along the entire burner with a steady flame (mostly blue). The unit has burner flame viewing cutouts to observe the burner flames (see IDENTIFICATION OF GRIDDLE CONTROLS section). If burner flames are not normal, check and clean the orifice and burner/venturi tubes for insects and insect nests. A clogged tube can lead to a fire beneath the unit. A proper flame pattern will ensure safe operation and optimal performance. Adjust the air shutter as needed to achieve proper flame pattern (see AIR SHUTTER ADJUSTMENT section, under SERVICING AND CLEANING for details).
8. The in-line gas valve or gas cylinder valve must always be shut OFF when the unit is not in use.
9. The drip collector trough holes and air baffle must be clear and unobstructed. Excessive grease deposits can result in a grease fire.
10. **Adults MUST be present when this gas appliance is operating. This appliance MUST NOT be left burning when unattended.**
11. **Do not store combustible materials in the enclosure directly beneath the appliance.**

WARNING

NEVER cover slots, holes, or passages in the oven bottom or cover an entire rack with material such as aluminum foil. Doing so blocks air flow through the oven and may cause carbon monoxide poisoning.

Aluminum foil linings may trap heat causing a fire hazard.

CAUTION: **FOR YOUR SAFETY, you must provide openings in the enclosure for replacement air and ventilation (in case of possible leakage from gas connections or propane cylinders). Failure to do so may result in a fire or explosion causing property damage, bodily injury, or death. See the ENCLOSURE REQUIREMENTS section for details.**

IMPORTANT: IN THE EVENT OF A GREASE FIRE, IMMEDIATELY SHUT OFF THE MAIN GAS VALVE TO THE UNIT. ALLOW THE FIRE TO EXTINGUISH ITSELF. KEEP AT A SAFE DISTANCE. A THOROUGH INSPECTION BY A QUALIFIED PROFESSIONAL SERVICE TECHNICIAN SHOULD BE CONDUCTED BEFORE FUTURE USE OF YOUR UNIT. THE SERVICE TECHNICIAN WILL CHECK THE SYSTEM FOR GAS LEAKS AND WILL CHECK ALL ELECTRICAL WIRING FOR DAMAGE. ALL GAS LEAKS AND WIRING MUST BE REPAIRED PRIOR TO FUTURE USE.

Whenever reconnecting any wires, apply a small amount of dielectric grease to the male connector, then make the connection. This will ensure conductivity and prevent moisture from affecting the contact.

The unit serial number tag can be found affixed to the griddle body behind the control panel (on an aluminum tag) and on the underside of the drip tray handle (on a thermal label). It is recommended that the drip tray first be removed and cleaned / emptied of its contents, then turned over to view.

The unit rating label is located inside of the control panel.

ELECTRICAL CONNECTIONS

A 120VAC (15 AMP minimum) GFCI GROUNDED three-wire receptacle (not included) is required within the vicinity of the unit to provide power to it. The GFCI receptacle must be a WEATHER-PROOF IN-USE COVERED RECEPTACLE.

- **Observe the National Electric Code and all local codes.**
- **Verify proper polarity of the receptacle.**
- **If an extension cord is used, ensure it is a three-wire GROUNDED cord that is rated for the power of the equipment, and is approved for outdoor use with a W-A marking. DO NOT use two-prong adapters.**
- **DO NOT TAMPER WITH THE EXTENSION CORD OR THE UNIT POWER-SUPPLY CORD.**

GAS SAFETY INFORMATION

WHEN OPERATING THIS GAS APPLIANCE, ALL INSTRUCTIONS AND WARNINGS MUST BE OBSERVED. FAILURE TO DO SO MAY RESULT IN A FIRE OR EXPLOSION CAUSING PROPERTY DAMAGE, BODILY INJURY, OR DEATH.

WARNING

This gas appliance and its enclosure **MUST** be plumbed and vented in accordance with local building and safety codes and should be approved by local code enforcement officials. This appliance **MUST** be installed and operated according to the information below.

FAILURE TO PROPERLY VENT THE ENCLOSURE MAY RESULT IN A FIRE OR EXPLOSION CAUSING PROPERTY DAMAGE, BODILY INJURY, OR DEATH.

A leaking gas connection or valve unintentionally left open will create a hazard.

WHEN USING PROPANE GAS

- **Propane gas** (also known as **L.P. gas**) is heavier than air and will accumulate or pool in an inadequately vented enclosure or recessed area.
- If a pool of **propane gas** is ignited, an explosion will occur. Adequate venting at the floor level, or the lowest point where gas could accumulate, will eliminate this danger.
Refer to the **ENCLOSURE REQUIREMENTS** section.
Observe all local codes.
- DO NOT store a spare propane-gas cylinder under or near the enclosure.

WHEN USING NATURAL GAS

- **Natural gas** is lighter than air and will accumulate at the top of an inadequately vented enclosure.
- If an accumulation of **natural gas** is ignited, an explosion will occur. Adequate venting at the top of the enclosure, or the highest point where gas could accumulate, will eliminate this danger.
Refer to the **ENCLOSURE REQUIREMENTS** section.
Observe all local codes.

INSTALLATION SAFETY GUIDELINES

THIS UNIT MUST BE INSTALLED SO THAT THE REQUIRED VENT OPENINGS AND SURROUNDING AREA OF THE ENCLOSURE REMAIN CLEAR AND FREE AT ALL TIMES. See the ENCLOSURE REQUIREMENTS section for details.

CAUTION: FOR YOUR SAFETY, you must provide openings in the enclosure for replacement air and ventilation (in case of possible leakage from gas connections or propane cylinders). Failure to do so may result in a fire or explosion causing property damage, bodily injury, or death. See the ENCLOSURE REQUIREMENTS section for details.

The gas cylinder, regulator, and rubber hose must be in a location not subject to temperatures above 125° F (51° C).

IF A PROPANE CYLINDER IS INSTALLED INSIDE OF THE ENCLOSURE, THE GUIDELINES FOUND IN THE **ENCLOSURE REQUIREMENTS** SECTION MUST BE FOLLOWED.

OPERATING THE UNIT SAFELY AND CORRECTLY

Every time you use the unit, **make sure that:**

1. The area around the unit is clear and free from combustible materials, gasoline and flammable vapours and liquids.
2. There is no blockage of the airflow through the vent openings located on the enclosure.
3. The hose is inspected (if applicable). See SAFE USE & MAINTENANCE OF PROPANE-GAS CYLINDERS section.

DO NOT store any combustible materials, gasoline, and any other flammable vapours/liquids in the vicinity of the unit. Provide adequate clearance for servicing and operation.

SAFE USE & MAINTENANCE OF PROPANE GAS CYLINDERS

IMPORTANT FOR YOUR SAFETY

READ AND FOLLOW ALL WARNINGS PROVIDED WITH THE PROPANE-GAS CYLINDER.

When operating this appliance with a propane-gas cylinder, these instructions and warnings **MUST** be observed.

FAILURE TO DO SO MAY RESULT IN A SERIOUS FIRE OR EXPLOSION.

For requirements related to ventilation, L.P. Cylinders, and the enclosure, see the ENCLOSURE REQUIREMENTS section.

CYLINDER/CONNECTOR REQUIREMENTS

- Propane-gas cylinders, valves, and hoses must be maintained in good condition and inspected before each use of appliance. They must be replaced if there is any visible damage. If hose is cut or shows excessive abrasion or wear, it must be replaced before using appliance (see e.).
- This unit, when used with a cylinder, should be connected to a standard 5-gallon (20 lb.) propane-gas cylinder equipped with a listed overfilling prevention device. The device has been required on all cylinders sold since October 1, 1998, to prevent overfilling.
- Cylinder dimensions should be approximately 12" (30.5 cm) in diameter and 18" (45.7 cm) high. Cylinders must be constructed and marked in accordance with the U.S. Department of Transportation (D.O.T.) *Specifications for LP-Gas Cylinders*, or the Standard for *Cylinders, Spheres, and Tubes for Transportation of Dangerous Goods and Commission*, CAN/CSA-B339, as applicable.
- The cylinder used must include a collar to protect the cylinder valve. The cylinder supply system must be arranged for vapour withdrawal. See Fig. 7-1.
- When used with a cylinder, the gas supply system must be used with a pressure regulator. The pressure regulator and hose assembly (**not supplied**) used must match the specification for Type I by ANSI Z 21.58/CGA 1.6 and must comply with UL 144 as a part of the self-contained LP gas supply system (see Fig. 7-1).
- The propane-gas cylinder valve must be equipped with a cylinder connection device, described as Type I in the standard defined in paragraph e. above. This device is commonly described as an Acme thread coupler.
- If the cylinder comes with a dust plug, place it on the cylinder valve outlet whenever the cylinder is not in use. Only install the type of dust cap on the cylinder valve outlet that is provided with the cylinder valve. Other types of caps or plugs may result in leakage of propane.

Fig. 7-1 Type I Acme thread coupler

Fig. 7-2 Vapour withdrawal detail

COUPLER OPERATION

To connect the regulator/hose assembly to the propane-gas cylinder valve fitting: Press the hand nut on the regulator over the Acme thread fitting on the cylinder valve. Turn the hand nut clockwise to engage the threads and tighten until snug. The use of pliers or a wrench should not be necessary. Only cylinders marked "propane" may be used.

To disconnect: Turn the hand nut counterclockwise until detached (Fig. 7-1).

— UTILISATION SÛRE ET ENTRETIEN DES CYLINDRES DE GAZ DE PROPANE —

IMPORTANT POUR VOTRE SÛRETÉ

LISEZ ET SUIVEZ TOUS LES AVERTISSEMENTS ÉQUIPÉS DE VOTRE CYLINDRE DE GAZ DE PROPANE.

En actionnant cet appareil avec un cylindre de gaz de propane ON DOIT observer ces instructions et avertissements.

LE MANQUE DE FAIRE AINSI PEUT AVOIR COMME CONSÉQUENCE UNE INCENDIE OU UNE EXPLOSION SÉRIEUSE.

Pour les exigences relatives à la ventilation, aux bouteilles de GPL et à l'enceinte, reportez-vous à la section ENCLOSURE REQUIREMENTS.

CYLINDRE ET CONDITIONS ET CARACTÉRISTIQUES DE CONNECTEUR

- Les bouteilles, les vannes et les tuyaux de propane doivent être entretenus et inspectés avant chaque utilisation. Ils doivent être remplacés en cas de dommages visibles. Si le tuyau est coupé ou présente des signes d'abrasion ou d'usure, il doit être remplacé avant utilisation (**voir e.**).
- Cette unité, lorsqu'elle est utilisée avec une bouteille, doit être connectée à une bouteille standard de gaz propane de 5 gallons (20 lb) équipée d'un dispositif anti-débordement répertorié. L'appareil est obligatoire sur toutes les bouteilles vendues depuis le 1er octobre 1998 afin d'empêcher tout remplissage excessif.
- Les dimensions du cylindre doivent être d'environ 12" (30,5 cm) de diamètre et 18" (45,7 cm) de hauteur. Les bouteilles doivent être construites et marquées conformément aux spécifications du ministère des Transports (DOT) pour les bouteilles à gaz LP ou à la norme relative aux bouteilles, sphères et tubes pour le transport des marchandises dangereuses et à la Commission, CAN / CSA-B339, selon le cas.
- La bouteille utilisée doit comporter un collier pour protéger le robinet de la bouteille. Le système d'alimentation de la bouteille doit être conçu pour le retrait de la vapeur. Voir Fig. 8-1.
- Lorsqu'il est utilisé avec une bouteille, le système d'alimentation en gaz doit être utilisé avec un régulateur de pression. Le régulateur de pression et l'ensemble de tuyau (**non fourni**) utilisés doivent correspondre à la spécification de type I par ANSI Z 21.58/CGA 1.6 et doivent être conformes à UL 144 en tant que partie du système d'alimentation en gaz propane autonome (voir Fig. 8-1).
- La valve de cylindre de gaz de propane doit être équipée d'un dispositif d'accouplement de raccordement de cylindre, décrit comme type I dans la norme définie dans le e. de paragraphe ci-dessus. Ce dispositif est généralement décrit comme coupleur de fil de point culminant.
- Si la bouteille est livrée avec un bouchon anti-poussière, placez-le sur la sortie du robinet de la bouteille la chaque fois que la bouteille n'est pas utilisée. Installez uniquement le type de capuchon anti-poussière sur la sortie du robinet de la bouteille qui est fourni avec le robinet de la bouteille. D'autres types de bouchons ou de bouchons peuvent entraîner des fuites de propane.

Fig. 8-1 Type coupleur de fil de point culminant d'I

Fig. 8-2 Détail du retrait de vapeur

OPÉRATION DE COUPLEUR

Pour relier le régulateur/hose à l'ajustage de précision de valve de cylindre de gaz de propane: Serrez l'écrou de main sur le régulateur au-dessus de l'ajustage de précision de fil de point culminant sur la valve de cylindre. Tournez l'écrou de main dans le sens des aiguilles d'une montre pour engager les fils et pour serrer jusqu'à ce que douillettement. L'utilisation des pinces ou de la clé ne devrait pas être nécessaire. Seulement le "propane" marqué par cylindres doit être employé.

Pour déconnecter: tournez l'écrou à main dans le sens antihoraire jusqu'à ce qu'il soit détaché (Fig. 8-1)

SAFE USE & MAINTENANCE OF PROPANE GAS CYLINDERS (Cont.)

Important: Before using the unit, and after each time the cylinder is removed and reattached, check the hose for wear (see a.) and check all connections for leaks. Turn off the unit valves and open the main cylinder valve, then check connections with soapy water. **NEVER USE A FLAME TO CHECK FOR LEAKS.** Repair any leaks before lighting the unit.

CAUTION: Always turn the propane cylinder main valve off after each use, and before moving the unit and cylinder or disconnecting the coupling. This valve must remain closed and the cylinder disconnected while the appliance is not in use, even though the gas flow is stopped by a safety feature when the coupler is disconnected.

Carefully inspect the hose assembly each time before the gas is turned on. A cracked or frayed hose must be replaced immediately.

If the appliance is stored indoors, the cylinder must be disconnected and removed. Disconnected cylinders must be stored outdoors, out of the reach of children, with threaded valve plugs tightly installed, and must not be stored in a building, garage, or any other enclosed area.

FOR YOUR SAFETY

- A. DO NOT store a spare propane-gas cylinder under or near this appliance.
- B. NEVER fill the cylinder beyond 80-percent full.
- C. IF THE INFORMATION IN a. AND b. IS NOT FOLLOWED EXACTLY, A FIRE CAUSING DEATH OR SERIOUS INJURY MAY OCCUR.
- D. **CGA 791 connections on LP gas cylinders:** The cylinder face elastomeric face seal element on these devices could, over time, show marked and visible damage or deterioration that might cause a leak even with the connection tightened. A visual inspection for the seal must be carried out every time a LP gas cylinder is replaced or refilled. Any LP gas cylinder showing signs of damage or deterioration as illustrated in Fig. 9-1, including visible cracks and pitting, must be replaced.

Fig. 9-1 Inspect rubber seal

■ UTILISATION SÛRE ET ENTRETIEN DES CYLINDRES DE GAZ DE PROPANE (suite) ■

Important: Avant d'employer le unité, et ensuite chaque fois que le cylindre est enlevé et rattaché, examinez tous les raccords pour déceler les fuites. Arrêtez les valves de unité et ouvrez la valve principale de cylindre, puis vérifiez les raccords avec de l'eau savonneux. **NE JAMAIS UTILISER UNE FLAMME POUR DÉTECTER DES FUITES.** Réparez toutes les fuites avant d'allumer le unité.

ATTENTION: Tournez toujours la valve principale de cylindre de propane au loin après chaque utilisation, et avant de déplacer le unité et le cylindre, ou débrancher l'accouplement. Cette valve doit rester fermée et le cylindre a débranché alors que l'appareil n'est pas en service, quoique l'écoulement de gaz soit arrêté par un dispositif de sûreté quand le coupleur est débranché.

Inspectez soigneusement l'ensemble de tuyau chaque fois avant que le gaz soit allumé. Un tuyau fissuré ou effiloché doit être immédiatement remplacé.

Si l'appareil est stocké à l'intérieur, le cylindre doit être disconnected et a enlevé. Des cylindres Disconnected doivent être stockés dehors, hors de la portée des enfants, avec les prises de valve fileté étroitement installées, et ne doivent pas être stockés dans un bâtiment, le garage, ou n'importe quel autre secteur inclus.

POUR VOTRE SÛRETÉ

- a. Ne stockez pas un cylindre de gaz disponible de propane dessous ou ne vous approchez pas de cet appareil.
- b. Ne remplissez jamais cylindre au delà de 80 pour cent de plein.
- c. SI L'INFORMATION DANS "A" ET "B" N'EST PAS SUIVIE EXACTEMENT, UN FEU CAUSANT LA MORT OU DES DOMMAGES SÉRIEUX PEUT SE PRODUIRE.
- d. **Connexions CGA 791 sur les bouteilles de GPL :** L'élément d'étanchéité en caoutchouc du joint d'étanchéité de la face élastomère du cylindre sur ces appareils pourrait, avec le temps, présenter des dommages marqués et visibles ou une détérioration qui pourrait causer une fuite même avec la connexion serrée. Une inspection visuelle du joint doit être effectuée chaque fois qu'une bouteille de GPL est remplacée ou remplie. Toute bouteille de GPL présentant des signes de dommages ou de détérioration, tel qu'illustré à la Fig. 10-1, y compris des fissures et des piqûres visibles, doit être remplacée.

Fig. 10-1 Inspecter le joint en caoutchouc

ENCLOSURE REQUIREMENTS

GFRC islands are available. They meet all enclosure and ventilation requirements. Contact your local dealer. For requirements regarding custom-built enclosures, see below.

To ensure proper operation and safety, the enclosure **MUST** comply with the following:

- Proper construction and cutout openings - see INSTALLATION REQUIREMENTS and ENCLOSURE PARAMETERS sections.
- Proper ventilation - see VENTILATION section.
- Proper clearances - see INSTALLATION REQUIREMENTS section.

You **MUST** read and follow these sections for complete enclosure requirement details.

ENCLOSURE PARAMETERS

General Guidelines

The enclosure can be constructed according to your individual preference, while following all guidelines found in this manual. **The enclosure MUST (see Fig. 11-1):**

- be installed on a hard and level surface
- be properly vented (see VENTILATION section)
- have a countertop that is non-combustible (enclosure may be combustible construction with proper provision*)
- have the minimum dimensions specified in Fig. 11-1
- have the minimum cutout dimensions (see CUTOUT DIMENSIONS section)
- be setup so that the power supply is within reach of a properly wired and inspected **120VAC (15 AMP minimum) Ground Fault Circuit Interrupter (GFCI) GROUNDED three-wire receptacle**
- have access to the interior for ease of installation and service
- be setup so the unit is as close to the vent openings as possible
- be designed so that the griddle is supported by the stainless-steel hanger extending from the upper portion of the unit (rests on left, right, and back of the countertop cutout), and the two front support adjustment bolts located below the control panel (left and right sides) - see INSTALLATION section
- have drainage cutouts (if needed) to prevent the accumulation of water within the enclosure
- meet all requirements found in Fig. 11-1 and the following sections

* When installing this unit in a combustible enclosure, an approved insulating liner MUST be used. Reference Table 3 in the MODEL SPECIFICATIONS section for liner model #.

When an L.P. cylinder is used in the enclosure, additional requirements exist, see the L.P. CYLINDER REQUIREMENTS section.

Fig. 11-1 Enclosure specifications

ENCLOSURE REQUIREMENTS (Cont.)

VENTILATION

FOR YOUR SAFETY, you must provide the openings specific to your gas type for replacement air and ventilation of the enclosure (in case of possible leakage from gas connections and L.P. cylinders as applicable, and for heat dissipation). See the following sections for ventilation requirements specific to your gas type. **Failure to provide proper ventilation for your gas type may result in a fire or explosion causing property damage, bodily injury, or death.**

WARNING: Vent openings in side walls shall not communicate directly with other enclosures of the outdoor cooking gas appliance (see Fig. 12-1).

- Ventilation openings shall not be located in front of the appliance above floor level.
- Every opening shall have a minimum dimension so as to permit the entrance of a $\frac{3}{16}$ " (4.8 mm) rod.
- **The openings must remain unobstructed:**

The clearance between the openings and any items outside of the enclosure is a minimum of 6". The clearance between the openings and any items within the enclosure is a minimum of 2". See Fig. 12-2.

Fig. 12-1 Correct / Incorrect side wall venting

- 6" min. clearance between all vent openings and any items outside of enclosure
- 2" min. clearance between all vent openings and any items within enclosure

Fig. 12-2 Vent openings clearance

KEEP THE REQUIRED VENT OPENINGS AND SURROUNDING AREA OF THE ENCLOSURE CLEAR AND FREE AT ALL TIMES.

Natural Gas Ventilation Requirements

When natural gas is used in the enclosure, **the guidelines below MUST be followed:**

One side of the enclosure shall be left completely open to the outside; **OR 1 minimum vent opening (at top level) or 2 vent openings (1 at top and 1 at floor level) MUST be created (reference Fig. 12-3):**

- When using only **1 vent opening**: the opening must be at top level and must have a minimum of **20 sq. in.** of free area.
- When using **2 vent openings**: The **top and floor level openings** must have a minimum of **10 sq. in.** of free area each. The openings must be equally sized (ventilation total of 20 sq. in. free area).
- The opening **at the top level** must begin 1" or less below the countertop level and end no more than 5" below the countertop level.
- If applicable, the opening **at the floor level** must begin 1" or less above the floor level and end no more than 5" above the floor level.
- If planning for 2 vent openings, it is acceptable to use RHP venting panels (PN 5510-01). Contact your dealer.

Note: These same requirements apply when multiple appliances exist in the enclosure.

NATURAL GAS VENTILATION REQUIREMENTS:

1 Vent Setup:

- Minimum 1 opening (at top level)
- Top opening: min. 20 sq. in. of free area, within 5" of countertop

2 Vent Setup:

- 2 openings (1 at top & 1 at floor level)
- Top opening: within 5" of countertop (see below)
- Floor opening: within 5" of floor (see below)
- Each vent opening: min. 10 sq. in. of free area
- Total = 20 sq. in. free area

Fig. 12-3 Natural gas ventilation detail

ENCLOSURE REQUIREMENTS (Cont.)

L.P. Cylinder Ventilation Requirements

When an L.P. cylinder is used in the enclosure, the guidelines below MUST be followed:

One side of the enclosure shall be left completely open to the outside; OR 4 minimum vent openings (2 at top and 2 at floor level) MUST be created (reference Fig. 13-1):

- Each opening at the top level must have a minimum of 10 sq. in. of free area. The openings must be equally sized.
- Each opening at the floor level must have a minimum of 5 sq. in. of free area. The openings must be equally sized.
- Ventilation total of 30 sq. in. free area
- Each opening at the top level must be on adjacent walls of the enclosure, and spaced at a minimum of 90 degrees. The openings must begin 1" or less below the countertop level and end no more than 5" below the countertop level.
- Each opening at the floor level must be on adjacent walls of the enclosure, and spaced at a minimum of 90 degrees. The openings must begin 1" or less above the floor level and end no more than 5" above the floor level.
- The above outlined is the minimum ventilation requirement for each L.P. cylinder used within the enclosure.
- For L.P. cylinders larger than 20 lb capacity, there must be a minimum of 1 in²/lb of open area for top vent openings and a minimum of 1/2 in²/lb of open area for bottom vent openings.

Note: These same requirements apply for each individual L.P. cylinder being used within the enclosure.

- **Additional requirements exist for L.P. cylinders, see the L.P. CYLINDER REQUIREMENTS section.**

Remote L.P. Ventilation Requirements

When a remote L.P. gas system is used with the enclosure, the guidelines below MUST be followed:

One side of the enclosure shall be left completely open to the outside; OR 4 minimum vent openings (2 at top and 2 at floor level) MUST be created (reference Fig. 13-2):

- Each opening must have a minimum of 45 sq. in. of free area. The openings must be equally sized.
- Ventilation total of 180 sq. in. free area
- Each opening at the top level must be on adjacent side walls of the enclosure, and spaced at a minimum of 90 degrees. The openings must begin 1" or less below the countertop level and end no more than 5" below the countertop level.
- Each opening at the floor level must be on adjacent walls of the enclosure, and spaced at a minimum of 90 degrees. The openings must begin 1" or less above the floor level and end no more than 5" above the floor level.

Note: These same requirements apply when multiple appliances exist in the enclosure.

L.P. CYLINDER VENTILATION REQUIREMENTS:

- Minimum 4 openings (2 at top & 2 at floor level)
- 2 per adjacent wall - spaced at min. 90 degrees
- Top openings: min. 10 sq. in. of free area each, within 5" of countertop (20 sq. in. top ventilation)
- Floor openings: min. 5 sq. in. of free area each, within 5" of floor (10 sq. in. floor ventilation)
- Total = 30 sq. in. free area

Note: Vent openings example shown. Your design may vary.

Fig. 13-1 L.P. cylinder ventilation detail

REMOTE LP VENTILATION REQUIREMENTS:

- Minimum 4 openings (2 at top & 2 at floor level)
- 2 per adjacent wall - spaced at min. 90 degrees
- Top openings: within 5" of countertop (see below)
- Floor openings: within 5" of floor (see below)
- Each vent opening: min. 45 sq. in. of free area
- Total = 180 sq. in. free area

Note: Vent openings example shown. Your design may vary.

Fig. 13-2 Remote LP ventilation detail

ENCLOSURE REQUIREMENTS (Cont.)

L.P. Cylinder Requirements (if applicable)

When a propane (L.P.) cylinder is installed inside of the enclosure, the additional guidelines below **MUST** be followed. FAILURE TO DO SO MAY CAUSE DAMAGE TO YOUR UNIT AND/OR PERSONAL INJURY. Refer to Fig. 14-1 and 14-2.

- Only a C.S.A. listed stainless-steel flex connector must be connected to the unit.
- The regulator/hose assembly coming from the cylinder must only be connected to the above mentioned flex connector. A 1/2" male-to-male flare adapter will be required (not included). **DO NOT connect the regulator/hose assembly directly to the unit.**
- A non-combustible heat shield must be installed to protect the regulator/hose assembly and cylinder valve.
- The cylinder must be properly secured, and rest at least 2" above the ground.
- An additional vent opening is recommended in the access door near the cylinder and at the gas connection level (minimum 10 sq. in. of free area).
- The pressure relief valve on the cylinder must be pointed toward the vent opening for vapour withdrawal.

An "access door with tank tray and louvers" is available. It includes a heat shield that rests directly above the L.P. cylinder, a tray, a retention device, and louvers to meet the cylinder install requirements. The door is shown in Fig. 14-3. Contact your dealer for ordering information.

Fig. 14-1 L.P. cylinder orientation (if applicable)

Fig. 14-2 Additional vent opening for L.P. cylinder

Fig. 14-3 Optional door w/ tank tray & louvers

ENCLOSURE REQUIREMENTS (Cont.)

CUTOUT DIMENSIONS

Important: These cutout dimensions below are for non-combustible enclosures. If installing this grill in a combustible enclosure, the correct insulating liner must be used (and the cutout dimensions will differ). See Table 3. Refer to the instructions supplied with the liner for the correct cutout dimensions.

Description (non-combustible cutouts)	A660i Griddle
A Countertop to unit bottom cutout*	11 1/2"
B Side to side non-combustible cutout*	31 1/4"
C Front to back non-combustible cutout*†	23 1/2"
D Control panel width non-combustible cutout‡	33"

* **Note:** If installing this griddle in a combustible enclosure, the correct insulating liner must be used. Consult liner instructions for counter cutout dimensions and installation.
 † Includes any substrate at front wall of enclosure (in the area the rear of the control panel is to sit flush against). See SUBSTRATE section on next page.
 ‡ Only applicable for non-combustible enclosures that have countertops with an overhang (see illustration and section below).

Table 1 - Cutout Dimensions (for non-combustible enclosures)

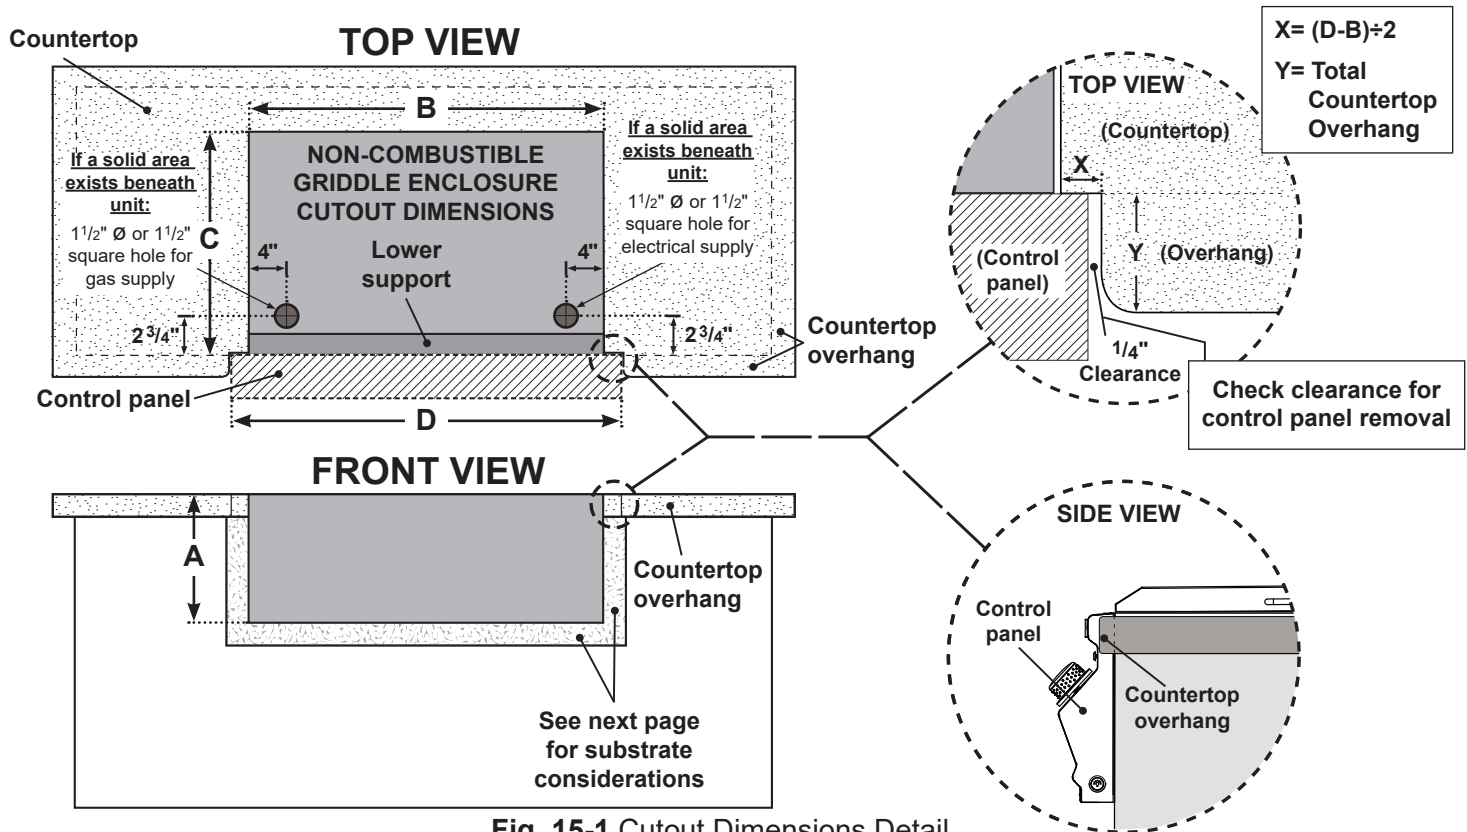

Fig. 15-1 Cutout Dimensions Detail

COUNTERTOP OVERHANG

The control panel is designed to sit flush against the enclosure front wall. If the countertop extends beyond the front wall, creating a countertop overhang, it must be cut flush with the front wall for the width of the control panel or a gap will be created exposing the forward portions of the left and right side grill fire walls. See illustrations in Fig. 15-1 above for the correct setup, and Fig. 15-2 for an incorrect setup.

Fig. 15-2

SUBSTRATE

When adding any substrate to the enclosure front wall (including tiles, stone, etc.), consider the following:

Substrate Behind Control Panel

Substrate + countertop "front to back" cutout must equate to **Dim. C** (see previous page) when the substrate sits flush behind the control panel.

Fig. 16-1

Substrate Alongside Control Panel

Any additional substrate alongside the control panel does not need to be considered in **Dim. C** (see previous page), however a 1/4" clearance on each side (same as overhang) and below is required.

Fig. 16-2

INSTALLATION REQUIREMENTS

Installation must be performed by a qualified professional service technician.

This unit is designed for outdoor use only. **DO NOT** use this unit inside a building, garage, or enclosed area. **DO NOT** install this unit in or on a recreational vehicle or boat.

Any constructed outdoor area in which the appliance is used shall comply with one of the following:

- An outdoor area with walls on three sides, and no overhead cover
- Within a partial outdoor area that includes an overhead cover and no more than two walls. The sidewalls may be parallel, as in a breezeway, or at right angles to each other
- Within a partial outdoor area that includes an overhead cover with walls on three sides, and at least 30% or more of the horizontal periphery of the enclosure that is open and unrestricted

Note: All openings must be permanently open.

Note: Sliding doors, garage doors, windows, or screened openings are not considered as permanent openings.

Refer to DIAGRAMMATICAL REPRESENTATIONS OF OUTDOOR AREAS section.

EXHAUST HOOD

IMPORTANT:

DO NOT use this appliance under combustible overhead construction unless installed in conjunction with a suitable UL 710 or ULC S646 approved heavy duty vent hood only. The vent hood must be placed in operation during operation of the appliance.

When installed under overhead non-combustible construction, an exhaust hood is highly recommended; see exhaust hood information below and Fig. 17-1.

When using an exhaust hood, the area above the cooking surface of the griddle must be covered with a hood larger than the cooking area of the griddle and with a minimum of 1200 CFM (cubic feet per minute) rated exhaust fan for proper outdoor application.

Fire Magic vent hoods, spacers, and duct covers are available. See Table 3. Contact your local dealer.

Clearances

A minimum 5 foot clearance is required between the and the overhead construction. (No combustible materials are allowed within this area.)

Fig. 17-1 Overhead requirements

CLEARANCES

Rear Wall

For the minimum clearances between the unit and rear walls, your setup must fall within one (or more) of the following:

A. Clearance between unit and strictly non-combustible rear wall

(i.e. brick wall, see Fig. 18-1)

- The unit must have a minimum clearance of 4" from the non-combustible rear wall.

(To allow for proper ventilation and prevent dangerous overheating.)

B. Clearance between unit and a protected combustible rear wall

(i.e. a non-combustible wall in front of a combustible wall to serve as a barrier. This can be accomplished by brick, or a metal stud finished with non-combustible substrate, see Fig. 18-2)

- The unit must have a minimum clearance of 12" from the protected combustible rear wall.

(The 4" non-combustible material plus an additional 8" clearance between the unit and protected rear wall.)

C. Clearance between unit and combustible rear wall

- The unit must have a minimum clearance of 15" from the combustible rear wall (see Fig. 18-3).

Backsplash (if applicable)

If a non-combustible backsplash exists, it must have a minimum of a 4" clearance from the rear of the unit (to allow for proper ventilation and prevent dangerous overheating). See Fig. 18-4.

Important: This 4" backsplash clearance must first be met prior to any non-combustible walls beginning behind it.

Clearances continued on the following page

Fig. 18-1 Clearance 'A' Diagram

Fig. 18-2 Clearance 'B' Diagram

Fig. 18-3 Clearance 'C' Diagram

Fig. 18-4 Backsplash clearance

INSTALLATION REQUIREMENTS (Cont.)

Corner Wall (if applicable)

The unit must have a minimum clearance of 24" from any corner walls (to account for variables in airflow that could affect performance). See Fig. 19-1.

Side Wall (if applicable)

The unit must have a minimum clearance of 12" from any side walls. See Fig. 19-2.

Cooling Appliance (if applicable)

The unit must have a minimum clearance of 14" from any cooling appliances such as refrigerators, kegerators, etc. See Fig. 19-3.

Heating Appliance (if applicable)

The unit must have a minimum clearance of 12" from any heating appliances such as pizza oven, griddle, etc. See Fig. 19-4.

Fig. 19-1 Corner wall clearance

Fig. 19-2 Side wall clearance

Fig. 19-3 Clearance to cooling appliances

Fig. 19-4 Clearance to heating appliances

INSTALLATION REQUIREMENTS (Cont.)

CONTROL PANEL CLEARANCES

- The control panel **MUST** have a minimum side clearance of 6" from any obstructions/side walls. See Fig. 20-1.
(To allow for access to light switch and control panel removal.)
- The control panel **MUST** remain removable for servicing (see CONTROL PANEL REMOVAL section). Any adjacent countertops must not obstruct the panel from being removed.

COMBUSTION AIR AND COOLING AIRFLOW

Proper airflow (front-to-back, Fig. 20-2) **MUST** be maintained for the unit to perform as it was designed. If airflow is blocked, overheating and poor combustion will result. Do not block the front air inlet along the bottom of the control panel.

CAUTION: Wind blowing into or across the rear vent (Fig. 20-4) can cause poor performance and/or dangerous overheating. Install the griddle so that the prevailing wind blows toward the front of the griddle (Fig. 20-3).

GAS-SUPPLY PLUMBING REQUIREMENTS

The gas supply is to be routed into the enclosure, near the unit. Your individual installation may vary. **Observe the National Fuel Gas Code and all local codes. Leak test at all connections.**

The gas supply must be sized to provide minimum inlet pressure at the maximum flow rate (BTU/hr). Undue pressure loss will occur if the pipe is too small, or the run is too long. Gas supply pipe must be 1/2" minimum interior diameter. If the gas line is longer than 20', a larger diameter line may be necessary. Refer to the NFPA 54 guidelines for further details.

DO NOT use a rubber hose within the enclosure.

A C.S.A. approved stainless steel flex connector is included and pre-installed to the valve manifold, and routes to the gas supply. A flare-to-NPT adapter is provided for 1/2" pipe. The use of any rigid pipe, semi-rigid tubing, and connectors must comply with the Standard for *Connectors for Outdoor Gas Appliances and Manufactured Homes*, ANSI Z21. 75 (CSA 6.27).

Use a pipe joint compound resistant to all gasses on all NPT pipe fittings. Make sure to tighten every fitting securely. **Do not use pipe joint compound to connect flare fittings.**

Important: A shut-off valve (not included) in the gas supply line is required. It must be installed within 6 feet of the unit and must be easily accessible. Use a pipe joint compound resistant to all gasses on all NPT pipe fittings **except flare fittings.** Refer to NFPA 54 guidelines for further details.

GAS SUPPLY INLET PRESSURES:

For **natural gas** - normal 7" water column (w.c.), minimum 5", maximum 10 1/2". For **propane gas** - normal 11" w.c., minimum 10", maximum 13".

Note: An additional regulator may be needed to meet these requirements.

Note: A sediment trap in the gas supply line is recommended where applicable. It should be installed downstream of the shut-off valve as close to the unit as possible. Refer to NFPA 54 guidelines for further details.

Fig. 20-1 Control panel clearances

Fig. 20-2 Airflow diagram

Fig. 20-3 Airflow direction - CORRECT

Fig. 20-4 Airflow direction - INCORRECT

DIAGRAMMATICAL REPRESENTATIONS OF OUTDOOR AREAS

The following figures are diagrammatical representations of outdoor areas, as defined in Clause 4.25.3. See INSTALLATION REQUIREMENTS section.

Fig. 21-2 Outdoor area - Example 2

Fig. 21-3 Outdoor area - Example 3

Fig. 21-4 Outdoor area - Example 4

30% or more of the horizontal periphery of the enclosure is open and unrestricted

Fig. 21-5 Outdoor area - Example 5

30% or more of the horizontal periphery of the enclosure is open and unrestricted

ELECTRICAL SAFETY

- To protect against electric shock, do not immerse cord or plugs in water or other liquid.
- Unplug from the outlet when not in use and before cleaning. Allow to cool before putting on or taking off parts.
- Do not operate any outdoor cooking gas appliance with a damaged cord or plug, or after the appliance malfunctions or has been damaged in any manner. Contact the manufacturer for repair.
- Do not let the cord hang over the edge of a table or touch hot surfaces.
- Do not use an outdoor cooking gas appliance for purposes other than intended.
- When connecting, first connect plug to the outdoor cooking gas appliance then plug appliance into the outlet.
- **Use only a properly wired and inspected 120VAC (15 AMP minimum) Ground Fault Circuit Interrupter (GFCI) GROUNDED three-wire receptacle with this outdoor cooking gas appliance.**
- The GFCI receptacle must be a WEATHER-PROOF IN-USE COVERED RECEPTACLE.
- Never remove the grounding plug or use with an adapter of two prongs.
- Use only extension cords with a three-prong grounding plug, rated for the power of the equipment, and approved for outdoor use with a W-A marking.
- **The provisions of the National Electric Code as well as any local codes must be observed when installing the product.**

MODEL SPECIFICATIONS

		A660i Griddle	
		Nat.	L.P.
Main burner	Quantity	2	2
	N/P orifice drill size	#46	#56
	N/P air shutter opening *	3/16"	3/16"
Input electrical requirements		100~240 VAC / 1.90 A max. / 50/60 Hz / GFCI outlet	
Appliance rating		13VDC / 156 Watts	
<p>* These are air shutter factory settings. These settings may require adjustment due to gas conversion, altitude, or other local conditions. See AIR SHUTTER ADJUSTMENT / BURNER FLAME INSPECTION section.</p> <p>† Note: If installing this unit in a combustible enclosure, the correct insulating liner must be used. Consult liner instructions for counter cut-out dimensions and installation.</p>

* Not shown

INSTALLATION

It is not required to remove the control panel or knobs to install this unit.

DO NOT lift the unit from the control panel when installing.

BUILD / CONSTRUCT ENCLOSURE

GFRC islands are available. They accommodate your griddle and side cooker/accessories. Build the enclosure per the instructions supplied with the unit.

Alternatively, a custom-built enclosure can be constructed. Construct the enclosure according to your individual install preference, while following the guidelines found in the ENCLOSURE REQUIREMENTS and INSTALLATION REQUIREMENTS sections.

- Construct the enclosure in an appropriate location (ensure all requirements of this manual and all local codes are met when determining location).
- **Follow all information regarding enclosure parameters, ventilation, drainage, cylinder requirements, cutout dimensions, and clearances listed in the ENCLOSURE REQUIREMENTS and INSTALLATION REQUIREMENTS sections.** Failure to do so will prevent proper operation and can cause property damage or personal injury.

INSTALL INSULATING LINER (if applicable)

If installing your unit in a combustible enclosure, the correct insulating liner must be used. Refer to the instructions supplied with the liner for installation.

REMOVE PACKAGED CONTENTS AND GRIDDLE TOP

1. Remove all contents from the box.

CAUTION: THE UNIT IS HEAVY AND REQUIRES TWO PEOPLE FOR SAFE HANDLING.

2. Remove the griddle top from the main frame. See the GRIDDLE TOP REMOVAL section for complete details. Carefully rest on a sturdy surface.

Note: Lift the griddle top from the left and right raised walls. See Fig. 28-2.

CAUTION: THE GRIDDLE TOP IS HEAVY.

3. Locate the wire harness that is cable-tied to the right side of the control panel, remove the caution sticker, cut the cable tie, and allow the harness to hang freely. See Fig. 28-3.
4. Remove any packaging materials (tape, etc.), if any, and discard.

Note: **DO NOT RE-INSTALL THE GRIDDLE TOP AT THIS POINT.**

Installation continued on following page

- Not to scale
- Example shown, design and location of enclosure and its items may vary
- See ENCLOSURE REQUIREMENTS section for details

Fig. 28-1 Enclosure construction overview (if applicable)

Fig. 28-2 Remove griddle top

Fig. 28-3 Cut cable-tie

SLIDE UNIT INTO ENCLOSURE CUTOUT

CAUTION: THE GRIDDLE IS HEAVY AND REQUIRES TWO OR MORE PEOPLE FOR SAFE HANDLING.

1. Before placing the unit into the enclosure cutout, the power supply with attached harness extension must first be inserted into the enclosure. **DO NOT** fasten the power supply, this is only temporarily placement. Keep the harness extension within reach for connection to the unit.
2. Carefully slide the unit **PARTIALLY** (slightly more than halfway) into the enclosure cutout and connect the harness extension to the harness coming from the unit. See Fig. 29-1.
3. Carefully slide the remaining portion of the unit fully into the enclosure cutout.
 - Ensure the electrical and gas connections are clear, undamaged, and completely inserted into the opening, and that the unit is correctly inserted without any obstructions between it and the countertop.
 - Ensure the unit fully slides in so that the control panel sits flush against the enclosure front wall. See Fig. 29-2 and see the **COUNTERTOP OVERHANG** section in **ENCLOSURE REQUIREMENTS** for details.
 - If installing on a countertop with an irregular/textured surface, a bead of silicone sealer rated for 400° F (204° C) or higher is recommended to protect from the elements.
4. Rotate the front support adjustment bolts (up or down) until the griddle hanger rests flush on the countertop, **AND**, the adjustment bolts are touching the supporting structure found at the bottom of the cutout (lower support). Use a 7/16" open-end wrench as needed. See Fig. 29-3.
 - The griddle should not solely rest on just the hanger or just the adjustment bolts.
 - The bolts **MUST** be used to provide support to the hangers.

Fig. 29-1 Connect harnesses

Fig. 29-2 Slide in unit (ensure flush)

Fig. 29-3 Front support adjustment bolts

Installation continued on following page

POWER SUPPLY

If a side cooker is to be installed and will be powered using the same griddle power supply, instead refer to the **POWER SUPPLY / WIRE HARNESS CONNECTIONS** section of the owner's manual included with the side cooker for power supply installation.

CAUTION: IMPROPERLY CONNECTED WIRES WILL CAUSE DAMAGE TO THE UNIT AND MAY RESULT IN PROPERTY DAMAGE AND/OR PERSONAL INJURY.

1. Route the wire harness extension below the control panel and directly downward. This will prevent overheating. **DO NOT** route the wire extension below the griddle. See Fig. 30-1, A.

Note: For enclosures with a solid area beneath the griddle, a cutout must be made near the wire extension to allow for the above requirement. If an insulating liner is installed, route the wire down through the provided opening on the liner.

2. Mount the power supply to the inside of the enclosure using appropriate hardware for your enclosure. See Fig. 30-1, B. **The power supply MUST BE:**
 - located at least **12"** below the bottom of the unit
 - protected from the weather/elements
3. Connect the cord coming from the power supply to a **120VAC (15 AMP minimum) GFCI GROUNDED three-wire receptacle** (see Fig. 30-1, C). The GFCI receptacle must be a WEATHER-PROOF IN-USE COVERED RECEPTACLE.

WARNING: Electrical Grounding Instructions - This appliance is equipped with a three-pronged (grounding) plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle. Do not cut or remove the grounding prong from this plug.

Fig. 30-1 Power supply installation

Installation continued on following page

CONNECT GAS SUPPLY

To Connect To Propane Cylinder:

Read the safety warnings and follow the instructions in the section SAFE USE AND MAINTENANCE OF PROPANE GAS CYLINDERS.

Note: When a propane cylinder is installed inside of the enclosure, the guidelines found in the ENCLOSURE REQUIREMENTS section **MUST** be followed.

To Connect To Natural Or Household Propane Gas Supply:

CAUTION: Use only C.S.A. listed stainless-steel flex connectors within the enclosure.

WARNING

A rubber or plastic connector will rupture or leak, resulting in an explosion or serious injury if used inside the appliance enclosure.

- Before connecting the gas supply to your appliance, pressures **MUST** be tested and **MUST NOT** exceed 10.5" w.c. for Nat. gas and 13" w.c. for L.P. gas. An additional regulator may be required.
- Refer to the GAS SUPPLY PLUMBING REQUIREMENTS section for all details on the gas supply and its setup.

1. **Turn OFF the gas supply at the source.**
2. Run the attached flex connector (coming from the griddle) to the gas supply stub.
3. A shut-off valve is required within 6 feet of the unit and must be easily accessible.

If shut-off valve is installed in-line:

- Install the supplied flare-to-NPT adapter to the gas supply (NPT) using a pipe joint compound resistant to all gasses (see Fig. 31-1, A). Tighten securely.
- Connect the flex connector to the adapter (see Fig. 31-1, A). Tighten securely.

If shut-off valve is connected to end of gas supply stub:

- Connect the flex connector to the shut-off valve (flare) (see Fig. 31-1, B). Tighten securely.

LEAK TEST

Turn all burner valves to the **OFF** position. Turn on the gas supply, and test at all connections for leaks using a soapy water solution. If bubbles appear, a leak is present. Turn off the gas and tighten at all connections. Repeat until no leaks are present. If a leak persists, turn off the gas supply and contact the local gas company or dealer. **NEVER USE A FLAME TO CHECK FOR LEAKS.**

Once the leak test is complete, turn off the gas supply and proceed.

Fig. 31-1 Connecting to a gas line

Fig. 31-2 Household LP & nat. gas diagram

Installation continued on following page

INSPECT HEAT DISTRIBUTION GRIDS

Inspect each heat distribution grid by ensuring the front tabs are properly inserted into the front firewall cutouts and the grids are resting evenly on each burner (see Fig. 32-1).

LIGHTING TEST

Prior to proceeding with installation, perform a lighting test.

1. Ensure the interior of the griddle is free of any packaging/plastic material.
2. Test each burner (see the LIGHTING INSTRUCTIONS section for lighting your burners).
3. Refer to the AIR SHUTTER ADJUSTMENT section to determine if the burners require air shutter adjustments.
4. **Allow the unit to completely cool after testing.**

REPLACE GRIDDLE TOP ASSEMBLY

1. Carefully place the griddle top back onto the main frame.

Note: Lift the griddle top from the left and right raised walls (see Fig. 32-2).

CAUTION: THE GRIDDLE TOP IS HEAVY AND REQUIRES TWO PEOPLE FOR SAFE HANDLING.

2. Secure the griddle top by fastening the provided screw into the screw hole located on the rear of the griddle top (see Fig. 32-3).

INSTALL REAR EXHAUST PLATE

1. Take the rear exhaust plate and align the three bolts (with pre-installed nuts) to the three cutouts on the griddle rear wall (see Fig. 32-4, A).
2. Fasten the nuts using a nut driver. Insert nut driver through the rear vent slots to tighten (see Fig. 32-4, A & B).

Installation continued on following page

Fig. 32-1 Inspect heat distribution grids

Fig. 32-2 Replace griddle top

Fig. 32-3 Secure griddle top

Fig. 32-4 Install rear exhaust plate

INSTALL DRIP COLLECTOR TROUGH

1. Place the left piece inside the griddle drip reservoir and completely slide it to the left side (see Fig. 33-1, A).
2. Place the right piece and ensure it overlaps the left tray as shown in Fig. 33-1, B.

INSTALL DRIP TRAY

Carefully align the drip tray to the opening found on the bottom front of the control panel and fully insert (see Fig. 33-2).

Fig. 33-1 Install drip collector trough

Fig. 33-2 Install drip tray

IDENTIFICATION OF GRIDDLE CONTROLS

Fig. 34-1 A660i Griddle controls

USING THE GRIDDLE

BEFORE INITIAL USE

Ensure that:

- the unit has been properly installed and leak tested by a qualified professional service technician and as instructed in this manual.
- you have read and understand all of the information in this manual.

BEFORE EACH USE

Ensure that:

- you smell around the appliance area for gas. If you smell gas (and all control knobs are in the **OFF** position), immediately shut off the gas supply and contact a qualified professional service technician or the gas supplier for inspection.
- the required vent openings and surrounding area of the enclosure are clear at all times.
- the cooking area, drip tray, and drip collector trough are clean, and the drip tray and drip collector trough are properly installed.
- you inspect all piping and hoses for damage, cuts, wear, and tear. Replace any damaged components prior to use.

OPERATION

- **The unit becomes HOT during use. NEVER touch any part of the cooking area or surrounding hot surfaces with bare hands. Use long-handled insulated BBQ tools and wear an insulated glove / oven mitt.**
- **Always keep your face and body as far from the unit as possible during use. Avoid wearing loose-fitting clothing as they could ignite.**
- **This appliance is designed as an attended appliance. DO NOT leave this appliance burning when unattended.**
- **After each use, turn the control knob(s) to the OFF position and turn off the gas supply to the unit.**

After reading and understanding all bullets above, follow these steps to light and use your griddle:

1. Remove the griddle lid.
2. Wipe the cooking surface with a damp clean cloth to remove dust/grime.
3. Coat the cooking surface with a cooking oil or a non-stick cooking spray (high smoking point and low-sugar content is recommended).
4. Light the griddle per the LIGHTING INSTRUCTIONS section.
5. Turn the control knobs to the HI-LIGHT position and allow the griddle to preheat for 15 minutes (verify cooking temperatures with a surface thermometer).
6. Place the food on the cooking surface and cook as desired. A griddle scraper is included to assist with cooking. Monitor the flames (through the burner flame viewing cutouts) and the temperature, and adjust the heat setting if necessary.

Note: Add cooking oil frequently as you cook to ensure the surface remains stick-resistant.

7. See the sections below and the following pages for all other information regarding use.

WIND CONSIDERATIONS

Proper airflow (front-to-back, Fig. 35-1) **MUST** be maintained for the unit to perform as it was designed. See the INSTALLATION REQUIREMENTS section for details.

When using the unit in windy conditions, the wind can disrupt the airflow and cause overheating.

Fig. 35-1 Airflow diagram

AFTER EACH USE

1. Clean the cooking surface, drip collector trough, and drip tray as instructed in the SERVICING AND CLEANING section.
2. Once the unit has completely cooled, replace the stainless steel griddle lid and cover the entire unit with a griddle cover.

Note: For additional cleaning information, refer to the SERVICING AND CLEANING section.

ALLUMAGE DES INSTRUCTIONS (D'ALLUMAGE)

Lisez toutes les instructions avant l'allumage, et suivez ces instructions chaque fois vous lumière le unité.

ELECTRONIC LIGHTING

Remarque: Le unité doit être relié à la puissance 120VAC pour l'éclairage électronique.

1. Retirez le couvercle de la plaque chauffante.
2. Tournez tous les boutons de commande du gaz sur leur position **OFF**.
3. Allumez le gaz à sa source.

Fig. 36-1 Bouton de commande

Pour votre convenance et sûreté ; quand le bouton de commande est tourné à la position de fonctionnement, l'indicateur d'écoulement de gaz changera de bleu en le rouge. (Le rouge indique l'écoulement de gaz.) Voir la Fig. 36-1.

4. Appuyez sur le bouton de commande souhaité **pendant 5 secondes**. Assurez-vous que l'allumeur brille (à l'intérieur du tube d'éclairage), puis tout en appuyant, tournez le bouton dans le sens inverse des aiguilles d'une montre jusqu'à la position **HI LIGHT** (Fig. 36-1). Une fois le brûleur allumé, relâchez le bouton.

Important: Inspectez les flammes du brûleur en regardant à travers les découpes d'observation de la flamme du brûleur situées au-dessus du bac collecteur d'égouttement. Ajustez la position de vision si nécessaire pour assurer la présence de flammes. (Fig. 36-2).

Fig. 36-2 Ports de la flamme du brûleur

ATTENTION: Si un brûleur ne s'allume pas dans cinq (5) secondes d'allumer le bouton de commande, enfoncez le bouton et tournez-le à la position **OFF**. ATTENDEZ CINQ (5) MINUTES avant de répéter l'étape 4. Si vous sentez le gaz, suivez les instructions sur la couverture de ce manuel. Si les brûleurs ne s'allument toujours pas après que plusieurs tentatives, se rapportent aux instructions pour l'éclairage manuel.

5. Répétez l'étape 4 pour que chaque brûleur additionnel soit Lit.

ÉCLAIRAGE MANUEL

ATTENTION: Attendez toujours cinq (5) minutes le gaz pour se dégager après que n'importe quelle tentative non réussie d'éclairage.

1. Suivez les étapes 1 à 3 (à gauche).
2. Tenez un briquet au butane ou une allumette à tige longue jusqu'à l'ouverture du tube d'éclairage (**trou PLUS PETIT**) **pendant 5 secondes**. Puis appuyer sur le bouton de contrôle approprié et en appuyant tourner dans le sens antihoraire à la position **HI LIGHT**. Retirez le briquet ou des allumettes quand le brûleur s'allume, puis relâchez le bouton de commande. Voir la Fig. 36-3.

ATTENTION: Si le brûleur ne se allume pas dans les cinq (5) secondes de tourner le bouton de commande, **appuyez immédiatement sur le bouton et tournez la valve sur OFF**. ATTENDEZ CINQ (5) MINUTES avant de répéter les étape 2 des instructions du MANUEL D'ÉCLAIRAGE.

Fig. 36-3 Éclairage manuel

ARRÊT DU UNITÉ

Pour éteindre l'appareil, appuyez sur chaque bouton de commande de valve et, tout en maintenant la pression, tournez-le dans le sens horaire jusqu'à la position **OFF**.

Après chaque utilisation, fermez toujours la vanne d'alimentation en gaz de l'appareil et éteignez l'interrupteur d'éclairage.

EMPLOYANT UN RÉSERVOIR DE PROPANE PORTATIF

Des réservoirs de propane sont équipés d'un dispositif d'arrêt de sûreté qui peut ne pas causer le bas ou aucunes pression de gaz/flamme aux brûleurs si le fonctionnement et l'allumage des instructions ne sont pas suivis exactement (voir la note importante dans la section de DÉPANNAGE pour plus de détails).

LIGHTING (IGNITION) INSTRUCTIONS

Read all instructions before lighting, and follow these instructions each time you light the unit.

ELECTRONIC LIGHTING

Note: This unit must be connected to 120VAC power for electronic lighting.

1. Remove the griddle lid.
2. Turn all gas control knob(s) to their **OFF** position(s).
3. Turn on the gas at its source.

Fig. 37-1 Control knob

For your convenience and safety, when the control knob is turned to the on position, the gas flow indicator will change from blue to red. (Red indicates gas flow.) See Fig. 37-1.

4. Depress the desired control knob **for 5 seconds**. Ensure the igniter is glowing (inside of lighting tube), then, while pressing turn the knob counterclockwise to the **HI LIGHT** position (Fig. 37-1). Once the burner lights, release the knob.

Important: Inspect the burner flames by looking through the burner flame viewing cutouts located above the drip collector trough. Adjust viewing position if needed to ensure flame presence. (Fig. 37-2).

Fig. 37-2 Burner flame viewing cutouts

CAUTION: If a burner does not light within five (5) seconds of turning on the control knob, depress the knob and turn it to the **OFF** position. WAIT FIVE (5) MINUTES before repeating step 4. If you smell gas, follow the instructions on the cover of this manual. If the burners still do not light after several attempts, refer to the instructions for manual lighting.

5. Repeat step 4 for each additional burner to be lit.

MANUAL LIGHTING

CAUTION: Always wait five (5) minutes for gas to clear after any unsuccessful lighting attempt.

1. Follow steps 1 through 3 (left).
2. Hold a burning long-barrel butane lighter or burning long-stem match up to the opening of the lighting tube (**SMALLER hole**) **for 5 seconds**. Then depress the appropriate control knob and while pressing turn it counterclockwise to the **HI LIGHT** position. Remove the lighter or match when the burner lights, and release the control knob. See Fig. 37-3.

CAUTION: If the burner does not light within five (5) seconds of turning the control knob, **immediately depress the knob and turn the valve to OFF**. WAIT FIVE (5) MINUTES before repeating step 2 MANUAL LIGHTING instructions.

Fig. 37-3 Manual lighting

SHUTTING OFF THE UNIT

To shut off the unit, depress each valve control knob and while pressing turn it clockwise to the **OFF** position.

After each use, always close the valve from the gas supply of the unit and turn off the light switch.

WHEN USING A PORTABLE PROPANE TANK

Propane tanks are equipped with a safety shutdown device that may cause low or no gas pressure/flame at the burners if operating and lighting instructions are not followed exactly (See important note in the TROUBLESHOOTING section for more details).

SERVICING AND CLEANING

Your griddle requires regular cleaning and maintenance. Refer to these instructions for details. Performing these procedures will ensure proper operation, appearance, and safety.

WARNINGS

- Prior to servicing or cleaning make sure the unit is completely cool, the control knobs are turned to the OFF position, the gas supply is shut off, the light switch is off, and the power supply is disconnected (unless otherwise stated).
- Wear appropriate gloves and safety glasses during any servicing or cleaning.
- The griddle **MUST** be cleaned regularly to prevent grease build-up and other food deposits. A clean and well maintained griddle prevents the risk of grease build-up and grease fires.
- Verify proper operation after servicing or deep cleaning.
- See INSTALLATION, OPERATION, AND SAFETY INFORMATION section for additional related information.

CLEANING YOUR GRIDDLE

Before Each Use

1. **Inspect and clean the cooking surface and exterior surfaces of the unit:** With a cool griddle, clean any dust, grease, splatter, or spills as needed with a damp clean cloth.

After Each Use

1. **Clean the cooking surface:** Operate the griddle on high until hot. Then turn OFF the griddle and follow the steps below to clean. Wear an insulated glove / mitt.
 - a. Lightly pour water on the cooking surface (or use a non-toxic griddle cleaning solution, highly recommended - not included). Then scrub using a heavy duty non-scratch scrub pad on the end of a long-handled insulated tool/ tongs/etc.

DO NOT flood the griddle with cold water or any liquid. This will cause damage to the griddle top, and cause the drip tray to overflow.

CAUTION: Steam will be hot.

- b. Use a long-handled insulated stainless steel spatula or heat-resistant squeegee to scrape the grime from back to front and into the drip collector trough.
 - c. Wipe down with a damp, clean, heavy-duty rag. Remove all cleaning solution if used.
 - d. Lightly coat the cooking surface with cooking oil to preserve it until the next cook.
2. **Clean the drip collector trough and drip tray:** When the griddle is cool, carefully remove the left and right trough pieces and dispose of contents appropriately. Clean in a soapy water solution. For tough deposits, a copper pad can be used. Always wipe with the grain. Rinse and dry completely, then replace the trough assembly.

Carefully remove the drip tray and dispose of contents appropriately. Clean in a soapy water solution. Rinse and dry completely, then insert the drip tray back into the griddle.

3. **Cover your griddle:** Once the griddle is dry and cool, place the griddle lid and cover your griddle with a Fire Magic protective cover (not included).

Continued on next page

Twice A Year - Deep Clean

1. **Interior of griddle:** In addition to cleaning the cooking surface, drip collector trough, and drip tray, a deep clean of the interior of the griddle, burners, and all components **MUST** be performed twice a year. Follow the steps below.
 - a. With a cool griddle, remove the griddle top, heat distribution grids, burners, drip tray chute, and air baffle. Clean all components in a soapy water solution, rinse, dry, and set aside. For tough deposits and burners, a copper pad can be used.
Note: Refer to the parts list and the GRIDDLE TOP REMOVAL, BURNER REMOVAL, and DRIP TRAY CHUTE REMOVAL sections as needed.
Important: The burner ports and carry-over ports/slots **MUST** be kept clean to ensure proper ignition and operation.
 - b. **Interior liner:** use a stainless steel putty knife to remove any grease and food deposits. Then use a grill cleaner and a copper pad to scrub the liner. Fire Magic grill cleaner is recommended. Follow instructions provided with the grill cleaner. Wipe down the entire surface of the liner with a wet, clean, heavy-duty rag. Remove all cleaner.
 - c. Re-install all components removed during this process.

2. **Exterior of griddle (except cooking surface):** With a cool griddle, use a grill cleaner (or a soapy water solution) and a clean cloth to remove grease and dirt from the lid and control panel. For tough deposits, a copper pad can be used. Always wipe with the grain. Rinse and dry completely. Then follow up with a stainless steel cleaner and a clean cloth.

If this routine cleaning is not performed, the stainless steel may become dull and develop surface rust (due to use and atmospheric conditions). If left uncleaned, significant damage and pitting may occur.

Fig. 39-1 Wipe with grain

Important: DO NOT use steel wool, any other metal tools, or any other cleaners/chemicals to clean the exterior other than recommended above. Such items promote rust.

Note: Due to the nature of stainless steel, temperatures produced by the cooking process will cause discoloration. This can be reduced by routine cleaning.

The griddle top cooking surface is only to be cleaned per the instructions on the previous page.

For Environments High In Salt, Chloride, Or Other Corrosive Chemicals

When this griddle is installed in a corrosive environment such as near the ocean (salt air), poolside (chlorine and/or pool chemicals) or any other location with exposure to high salt/chloride content or corrosive chemicals/solutions, it will be more susceptible to corrosion and **MUST** be maintained/cleaned more frequently.

- DO NOT store any corrosive chemicals (chlorine, hydrochloric acid, fertilizer, etc.) near your stainless steel griddle.
- DO NOT allow any corrosive materials (masonry dust, debris, etc.) to settle on your stainless steel griddle.
- These environments, chemicals, and materials may cause the 304 stainless steel to develop surface rust and consequently pitting. Under these conditions the griddle exterior **MUST** be cleaned at least monthly. Inspect your griddle often and clean accordingly.

Protecting Your Griddle

In addition to the supplied griddle lid (placed first), an optional Fire Magic protective cover will protect your griddle when not in use. Install the cover on a cool and dry griddle. DO NOT cover a damp griddle. During high humidity or after rainy conditions, remove the cover to dry trapped moisture if present. (If the cover is installed over a damp griddle it can cause surface rust.)

Ensure that the **INSIDE** of the cover is DRY before putting it back on the griddle.

GRIDDLE TOP REMOVAL

1. Remove the drip collector trough assembly from the front of the griddle top and set aside. Reference the INSTALL DRIP COLLECTOR TROUGH section, if needed.
2. Remove the rear exhaust plate by loosening the three nuts (no need to remove nuts completely), then lift the panel up from the griddle top (see Fig. 40-1).
3. Locate the screw found on rear of the griddle top and remove (see Fig. 40-2).
4. Remove the griddle top by lifting the griddle upward and out from the main frame. Carefully rest on a sturdy surface.

Note: Lift the griddle top from the left and right raised walls. Reference Fig. 40-3.

CAUTION: THE GRIDDLE TOP IS HEAVY AND REQUIRES TWO PEOPLE FOR SAFE HANDLING.

5. Replace the griddle top, its screw, and the rear exhaust plate once complete.

HEAT DISTRIBUTION GRID(S) REMOVAL

1. Remove the griddle top (see GRIDDLE TOP REMOVAL section above).
2. Remove the grid(s) as shown in Fig. 40-4. Lift from the rear, and free the front tabs (on the grid) from the cutouts in the front firebox wall.
3. Replace the grid(s) and griddle top once complete.

Fig. 40-1 Rear exhaust plate removal

Fig. 40-2 Rear screw removal

Fig. 40-3 Griddle top removal

Fig. 40-4 Heat distribution grid(s) removal

BURNER(S) REMOVAL

1. Remove the griddle top and heat distribution grid(s) (see GRIDDLE TOP REMOVAL and HEAT DISTRIBUTION GRID REMOVAL sections on previous page).
2. Locate the burner clip (located over the rear center tube of the burner) and slightly pinch and remove the clip from the burner support. See Fig. 41-1.
3. Carefully lift the burner from the burner support anchor peg holes and out from the hole in the forward fire wall.
4. To replace the burner, slide the open cylindrical end of the burner around the orifice, enveloping it and centering on it. Then lower the back end anchor pegs into the burner support anchor peg holes.

Note: It is critical to the continued safe functioning of the burners that the orifices are centered and completely inside the burner gas inlets.

5. Re-install the burner clip around the burner and into the holes in the burner support.
6. Replace the heat distribution grid(s) and griddle top.

Fig. 41-1 Main burner removal

Fig. 41-2 Drip tray chute removal

DRIP TRAY CHUTE REMOVAL

1. Remove the griddle top (see GRIDDLE TOP REMOVAL section on previous page).
2. Remove the drip tray chute by pulling it upward (see Fig. 41-2).

Note: Take note of the flange located on the top front of the chute for re-installation.

3. To replace, drop the chute back into the top and bottom cutouts of the front firebox wall. The front flange MUST sit flush against the firebox wall. See Fig. 41-3.

Important: The chute must be properly installed for the griddle top to install correctly.

4. Replace the griddle top.

Fig. 41-3 Drip tray chute installed

SYSTEM RESET

If the unit is connected to the power supply but the ignition system and electronic components are not functioning, the power supply is likely to be in "protection mode" and a system reset will need to be performed.

1. **Ensure the knobs are in the OFF position, the gas supply is turned off, and the light switch is off.**
2. Disconnect the harness extension from the power supply (see Fig. 41-4, A).
3. Disconnect the power supply from the power source. (see Fig. 41-4, B).
4. Check/replace any harnesses as needed.
5. Ensure the power GFCI breaker is reset.
6. Reconnect the power supply to the power source, then connect the harness to the power supply.
7. Test all components.

Note: The green LED light on the power supply indicates it is working properly.

Fig. 41-4 Perform system reset

CONTROL PANEL REMOVAL

1. Turn the control knob(s) to the OFF position and turn off the gas supply to the unit.
2. Turn off the light switch and disconnect the power supply from the power source.
3. Pull the control knob(s) from the stems and set aside.
4. Remove the drip tray.
5. Using a Phillips screwdriver, unscrew and remove the control panel fastener screws and washers (located on the left and right front face of the control panel). Retain the screws for later re-installation.
6. Carefully open the control panel by lifting and pulling the control panel from the frame, allowing it to rest on the internal chain(s).

Important: When opening, take caution to not damage any wiring.

7. If wire disconnections are required, reference the wire diagram in the MODEL SPECIFICATIONS section in this instruction manual or the wire diagram label affixed to the inside of the control panel.

Note: Secure any disconnected wires (coming from the inside of the unit) to prevent them from falling in.

Note: Whenever reconnecting any wires, apply a small amount of dielectric grease to the male connector, then make the connection. This will ensure conductivity and prevent moisture from affecting the contact.

Important: During reinstallation; prior to opening the gas shut-off valve, be sure the control knob(s) are in the OFF position.

CONVERT GAS TYPE / CHECK BURNER ORIFICES

WHEN CONVERTING TO A NEW GAS TYPE, THE ENCLOSURE MUST HAVE PROPER VENTILATION FOR THE NEW GAS TYPE. See the ENCLOSURE REQUIREMENTS section for complete details.

CAUTION: Make sure the unit is at a safe temperature and isolated from gas and electrical supplies before beginning.

For your safety, exercise caution, and make sure you have adequate hand protection, such as gloves, when handling metal parts.

Apply Conversion Label

This unit comes from the factory configured for one type of gas as marked on the label behind the control panel.

When the unit is converted, the label for the new gas (included at original shipping) MUST be filled out and applied next to the existing label mentioned above.

Convert Regulator

The gas regulator, located behind the control panel (see CONTROL PANEL REMOVAL section), must be set for the type of gas used to fuel the unit. To check the regulator setting, remove the cap in the center of the regulator (Fig. 43-1, A). Holding the cap vertical (see Fig. 43-1, B), the letters at the bottom of the plastic stalk indicate the gas type for which the regulator is currently configured.

If the text on the bottom of the regulator stalk does not match the gas type connected to the unit, remove the stalk from the cap, invert, and replace into center of cap. Replace cap on the regulator, screwing down until snug. Replace the control panel.

Procedure continued on following page

Fig. 43-1 Regulator conversion

Convert Gas Orifices

When converting the unit to a different gas type, each burner's orifice must be replaced with the corresponding orifice for the new gas.

See Table 2 to determine the proper orifice sizes for each burner.

Important: It is critical to the operation of each burner that its orifice be fully inserted into the center of its orifice opening.

WARNING

HAZARDOUS OVERHEATING WILL OCCUR IF A NATURAL-GAS ORIFICE IS USED WITH PROPANE GAS.

1. Remove the griddle top (see GRIDDLE TOP REMOVAL section).
2. Remove the heat distribution grids and burners (see HEAT DISTRIBUTION GRID REMOVAL and BURNER REMOVAL sections).
3. Use a $\frac{3}{8}$ " hex nut driver to remove the exposed orifices (Fig. 44-1). Check orifices. If needed, replace them with the correct orifices for the new gas.
4. Replace the burners.

Note: It is critical to the continued safe functioning of the burners that the orifices are centered and completely inside the burner gas inlets.

5. Replace the heat distribution grids and griddle top.

Connect To New Gas Supply

Plumb the unit as appropriate for the new gas supply. (Additional components may be needed for your specific setup.) **Be sure to leak test at all connections.**

Fig. 44-1 Orifice conversion

AIR SHUTTER ADJUSTMENT / BURNER FLAME INSPECTION

Important: Air shutters are preset at the factory (see Table 2 in MODEL SPECIFICATIONS). However, gas conversion, altitude, or other local conditions may make it necessary to adjust the air shutters.

Note: To verify proper settings, the flames of the burners should be visually checked for proper flame appearance and behavior. Light the unit with the burner(s) on HI setting. Allow at least 2 minutes to burn. See below and Fig. 45-1. The flames should:

- be blue and stable with little to no yellow tips
- burn quietly, and appear to touch the burner

If the flames appear unstable, yellow, noisy, or lift away from the burner, follow the steps below.

Main Burner

Begin with a completely cool unit. Remove the burners (see BURNER REMOVAL section). First ensure the burner orifice, ports, venturi tubes, and air shutter openings are all clear of any insect or insect nests. If they are blocked, clean them, reinstall the burners, and reinspect the flames. If adjustment is still needed, **allow the unit to cool**, remove the burner, and proceed to the steps below.

1. To adjust the air shutter, loosen the adjustment screw with a flathead screwdriver. Then rotate the shutter to open or close it. See Fig. 45-2 for details.
 - Begin with the appropriate factory setting for your model (see Table 2 if needed).
 - If the flames were excessively yellow (insufficient air), open the shutter to allow more air to the burner. If the flames were noisy and lifting off the burner in some areas, close the shutter to allow less air to the burner. Adjust accordingly.

Note: Make minimal adjustments. Very small changes result in major changes in flame appearance.

2. Reinstall the burner, light the unit with the burner on HI, and observe the flames. If needed, allow the griddle to completely cool, and repeat the adjustment process until the proper flame is achieved.
3. Once finished, allow the unit to completely cool, remove the burner, and tighten the adjustment screw. Reinstall the burner.
4. Repeat for all other main burners as needed.
5. Reinstall all other components that were removed.

Fig. 45-1 Proper flame appearance

Fig. 45-2 Main burner air shutter adjustment detail

VALVE "LOW" SETTING ADJUSTMENT

Stability of the "low" setting on all burners may vary due to wind direction, appliance configuration, and position. If your burner goes out when set on low, the valve "low" setting needs adjustment.

Note: Adjustments MUST only be performed by a qualified professional service technician.

To adjust the valve "low" setting:

1. **Ensure the unit is completely cool and the knobs are in the OFF position.**
2. Remove the griddle top and heat distribution grids. See the GRIDDLE TOP REMOVAL and HEAT DISTRIBUTION GRID(S) REMOVAL section for details.
3. Light the burner on HIGH, then turn the burner to LOW setting. While the burner is lit, remove the control knob from the valve.
4. Locate the FLATHEAD adjustment screw found inside the valve stem (see Fig. 46-1).
5. Using a flathead screwdriver, slowly turn the adjustment screw a little at a time (30° to 45°) in either direction. Adjust the screw as needed until the flame is approximately 1/4" in height from all the burner ports, and the flames are stable.
6. Once the appropriate setting is reached, re-install the control knob and shut off the burner valve.
7. Repeat this procedure for other burner valves, if needed.
8. Reinstall the heat distribution grids, griddle top, and any other components that were removed.

Fig. 46-1 Valve adjustment screw location

Fig. 46-2 Stem adjustment

CONTROL KNOB FITMENT ADJUSTMENT

If a control knob needs to be adjusted for a sturdy fit, follow the steps below:

1. Gently pull the knob off the stem.
2. Insert a flathead screwdriver into the split portion of the stem and GENTLY turn the screwdriver clockwise. Be cautious! Only a slight turn is needed as the stem is flexible. See Fig. 46-2.
3. Check fitment by reinstalling the control knob, and adjust further (if needed).

TROUBLESHOOTING

If you have trouble with the unit, please use this list to identify the problem. By trying one or more of the solutions to the possible cause, you should be able to solve the problem. If this list does not cover your present problem, or if you have other technical difficulties with the unit, please contact your local dealer.

PROBLEM	POSSIBLE CAUSE	CORRECTION
No power to griddle	<ol style="list-style-type: none"> 1. Input power source failure 2. Power supply failure 	<ol style="list-style-type: none"> 1. Check GFCI / circuit breaker. 2a. Power supply in "protection mode" - see SYSTEM RESET section under SERVICING AND CLEANING. 2b. Replace power supply.
Accessories do not operate	<ol style="list-style-type: none"> 1. Power source not hooked to power supply 	<ol style="list-style-type: none"> 1. Hook external power to unit.
Ignition system failure	<ol style="list-style-type: none"> 1. Power supply failure 2. Improper air shutter adjustment 3. Ignition wire disconnected 4. Low gas pressure 5. Front carry-over ports clogged 6. Igniter malfunction 7. Igniter switch malfunction on valve 	<ol style="list-style-type: none"> 1. See 2a of No power to grill section above and/or replace power supply. 2. Adjust air shutters. 3. Plug wires back into ignition switches. 4. Have the gas co. check pressure at unit. 5. Clean burner ports. 6. Contact dealer for replacement. 7. Contact dealer for replacement.
Insufficient heat / low flame	<ol style="list-style-type: none"> 1. Burner ports clogged 2. Improper air shutter adjustment 3. Using propane orifice for natural gas 4. Low gas pressure/flame (propane) 5. Low gas pressure/flame (natural) 6. L.P. regulator hose stuck/damaged 	<ol style="list-style-type: none"> 1. Clean burner ports. 2. Adjust air shutters. 3. Check/change orifices. 4. Shut off all valves, including propane tank, and follow lighting instructions exactly. (See important note* below.) 5. Have a qualified professional service technician check for proper gas supply, setup, and pressure. 6. Replace L.P. regulator hose.
Uneven heating	<ol style="list-style-type: none"> 1. Burner ports partially blocked by debris 2. Small spiders or insects in burner 3. Improper air shutter adjustment 	<ol style="list-style-type: none"> 1. Remove burners and clean out ports. 2. Inspect burners and orifices for spider webs or other debris that may block flow. 3. Adjust air shutters.
Knob lights not operating	<ol style="list-style-type: none"> 1. Light switch not functioning 2. Knob light(s) burned out 	<ol style="list-style-type: none"> 1. Contact dealer for replacement. 2. Contact dealer for replacement.
Burner goes out on LOW	<ol style="list-style-type: none"> 1. Valve "Low" setting needs adjustment 	<ol style="list-style-type: none"> 1. Light burner on HIGH, immediately turn to LOW setting. Remove knob from valve and using a small flat screwdriver, slowly turn the adjustment screw in the stem, a little at a time (30° to 45°), in either direction, until the flame is approximately 1/4" in height from burner ports.

*** Important:** Propane tanks are equipped with a safety shutdown device that may cause low or no gas/flame at the burners if operating and lighting instructions are not followed exactly. **If you suspect the propane tank safety shutoff is in effect:** 1) Shut off all griddle burner valves. 2) Shut off tank valve. 3) Open and close a main burner valve. 4) Open tank valve. 5) Follow the LIGHTING INSTRUCTIONS. Lighting instructions are located in your owner's manual and printed on the unit's metal drip tray. If the problem persists, continue troubleshooting, or contact your local dealer or R. H. Peterson for assistance.

WARRANTY

PETERSON FIRE MAGIC GRILLS AND ACCESSORIES LIMITED WARRANTY

R.H. Peterson Co. ("RHP") warrants your Fire Magic® grill to be free from defects in material and workmanship.

Fire Magic cast stainless-steel gas burners, Choice stainless steel U shaped burners, cooking grids, and Barbecue and vent hood housings are warranted **as long as the original purchaser owns them -- LIFETIME**. (Except as described below.)

Fire Magic brass valves, manifold assemblies, inner liners, porcelain housings (including ovens and barbecue faces), and **backburner assemblies** (except ignition systems) are warranted for **FIFTEEN (15) YEARS**.

Fire Magic built-in pizza ovens and griddles (except ignition system and thermostat) are warranted for **TEN (10) YEARS**.

Fire Magic heating elements, Infra-red burners, flavor grids, and charcoal stainless steel grills are warranted for **FIVE (5) YEARS**; except for the charcoal pan, charcoal grid, analog thermometer, and ash catch tray, which are warranted for **ONE (1) YEAR**.

Fire Magic side burners, induction cooktops, exterior Glass Fiber Reinforced Concrete (GFRC) grill island systems, and all other grill, vent hood, pizza oven and griddle components (except ignition systems and electronic parts) are warranted for **THREE (3) YEARS**.

Fire Magic Echelon gas grill, pizza oven and EL500 electric grill under glass touch screen electronic controls are warranted for **TWO (2) YEARS**.

Fire Magic grill, pizza oven and griddle ignition systems (excluding batteries), electronic components (including lights, digital thermometers and thermostats) and accessories are warranted for **ONE (1) YEAR**.

A COPY OF YOUR SALES SLIP FOR PROOF OF PURCHASE IS REQUIRED

This warranty applies to the original purchaser for products which are installed in the United States or Canada and which are operated and maintained as intended for single family residential usage (if the unit is installed in a commercial / multi-user setting, a separate Commercial / Multi-User Limited Warranty applies and is available from RHP). This warranty is valid only with proof of purchase, commences on the date of purchase, and terminates (both as to original and any replacement products) on the anniversary date of the original purchase of the product per the above schedules.

This warranty **does not** cover parts which become defective as a result of negligence, misuse, or use not in compliance with the Installation and Owner's Manual, accidental damage, improper handling, improper storage, improper installation, **lack of required routine maintenance** (as specified in the Installation and Owner's Manual), electrical damage, local gas impurities or failure to protect against combustible materials. Product must be installed (and gas must be connected) as specified in the Installation and Owner's Manual by a **qualified professional installer**. This warranty **does not** apply to normal occurrences that may be expected with any outdoor product such as rust, corrosion, oxidation, or discoloration unless the affected part becomes inoperable. RHP products including valves, pilots and controls are designed and certified to be used as a system. Modifications to products which are not specifically authorized will void this warranty and could render the product to be unsafe. Burners, valves, parts, remotes, accessories, etc. used with this product must be RHP products or this warranty is void.

Warranted items will be repaired or replaced at RHP's sole discretion. This warranty **does not** cover labor or labor related charges, except as provided by separate specific written programs from RHP. All repair work must be performed by a qualified professional service person and requires prior approval of RHP.

RHP may require the defective product or part to be returned to the factory to determine the cause of failure. RHP will pay freight charges if the product or part is determined to be defective. This warranty does not cover breakage in shipment from our independent distributor to its customer if the damage is determined to have occurred during that shipment.

This warranty specifically excludes liability for **indirect, incidental, or consequential** damages. Some states and provinces do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion may not apply to you. This warranty gives you specified legal rights, and you may have other rights that vary from state to state or province.

For additional information regarding this warranty, or to place a warranty claim, contact the RHP dealer where the product was purchased.

When contacting your RHP dealer or the R.H. Peterson Co., please provide the following information:

- Your name, address, telephone number, e-mail
- Sales receipt showing where purchased and date purchased
- Model number, serial number of product, date code
- Relevant information: installer, additions, repairs, when defect was first noted
